Dynamic Solutions' brand of vibration test systems are manufactured in the world's largest and most state-of-the-art facility for producing electro-dynamic test equipment. The impressive complex includes a research institute, ISO9001 compliant manufacturing areas, executive offices, conference facilities and a contract test laboratory.

Dynamic Solutions and its manufacturing partner are constantly developing and improving our products to guarantee you the most reliable and efficient vibration test systems available. Our conservatively rated shaker systems are designed to provide years of trouble free service.

Every vibration test system built for export to the Americas must pass a comprehensive test protocol and meet the performance standards defined per ISO-5344 before being approved for shipment. Backed by the best warranty in the industry and including more standard features, such as automatic armature centering and blower silencers, Dynamic Solutions continually proves when it comes to electro-dynamic test systems, we define value.
